

Class Project “Verification of Digital Systems“

WS 2015/2016

- To work on the server (*frascati*) follow the same instruction as in the document “*Manual for connecting the server*” available on the website of the laboratory.
 - To login with the account assigned for the class project use your new account *vdscp\$\$* and the corresponding password to login (do not use the login data of the laboratory)
 - All tools required to finish the class project are installed and configured on the server and are accessible from the class project accounts
 - Note: all tools used in the project are free to the public and therefore you can setup the whole environment on your own computer
 - Additionally, for the class project we have installed *xpdf* to read PDF documents and *iron* to navigate on internet
